Phase Coordinates and Published Population Topology

(A) One circular coordinate

Coordinate space: S^1

(B) Two circular coordinates

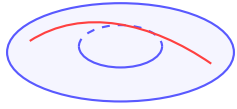

$T^2 = S^1 \times S^1$

(C) Three circular coordinates

$T^3 = (S^1)^3$, distinct from S^3

(D) Published population topology

Gardner et al. (2022)
Schematic, not local data

Coordinate spaces do not specify invariant subsets,
normal attraction, or dense trajectories.
